Study Shows Direct Correlation between 5G Networks and "Coronavirus" Outbreaks

April 24, 2020

admin

19 Comments

At last, the first study has emerged regarding the very clear relationship between “coronavirus” outbreaks and the presence of 5G networks. Thanks to Claire Edwards for making this available in English

==========

Study of the correlation between cases of coronavirus and the presence of 5G networks

Author: Bartomeu Payeras i Cifre1
Available at www.tomeulamo.com/fitxers/264_CORONA-5G-d.pdf

Translated from the Spanish by Claire Edwards

Date: March-April 2020

The COVID-19 pandemic and its effects in early 2020 have surprised scientists and politicians. If any study aimed at understanding the phenomenon and which consequently may help to clarify the causes of the pandemic is carried out, it should be promoted and/or taken into consideration. The correlation between cases of coronavirus and the presence of 5G networks has been addressed in alternative media and social networks. It is noteworthy that, at least in Spain, the media have not covered the scientific studies on the subject of 5G, nor asked the government any questions about this in the daily press conferences that it conducts to report on the state of the situation. The team of scientists advising the Spanish government has also failed to raise this issue.

It is common sense that the ability to demonstrate this correlation would be very important data to contribute to the understanding of, and the solution to, the problem.

Objective

To assess whether a correlation exists between cases of coronavirus and the presence of 5G networks. Without entering for the moment into subsequent cause-effect approaches in the case of positive results. Given that there is a sufficiently large statistical sample, it is possible for the results obtained to have a high level of reliability.

Material and methods

The study has benefited from the official statistical material published daily, which is a basic and valuable tool. It should be noted that in these publications, the methodology used for counting cases of coronavirus infections does not generally provide real data. In Spain and many other countries, it has not been calculated as there are not enough tests for such analyses. However, this does not alter the results of this study since it is based on the comparative rather than the absolute method of infection. Therefore, in order to avoid statistical error, we will compare the density value of confirmed cases of coronavirus (expressed in number of cases per 1000 inhabitants) instead of absolute values. Since the criterion for counting used by the health authorities within the same state or city is the same, the comparison of published values for different cities or regions will be equally reliable for statistics. Comparisons between different countries of confirmed cases, excluding asymptomatic cases, will be equally reliable. The possible exception of some non-transparent country that could manipulate the publication of its data is beyond the control of this study.

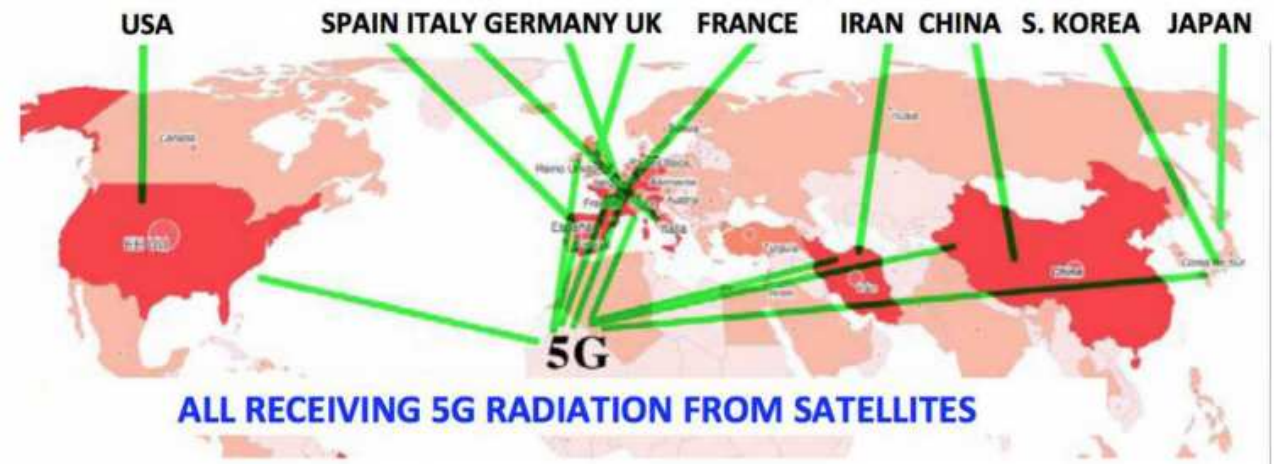
The method used was to compare the incidence (no. of cases per 1000 inhabitants) between countries with and without 5G technology. Between regions of the same country with and without 5G technology. Between cities of the same state with and without 5G technology. Between different neighbourhoods of the same city with the 5G network map of that city. Comparing states with common borders with and without 5G technology. Comparing the case of one state within another, as is the case of San Marino.

– The data for each chart were taken on the same day. Graphic results and data published below:

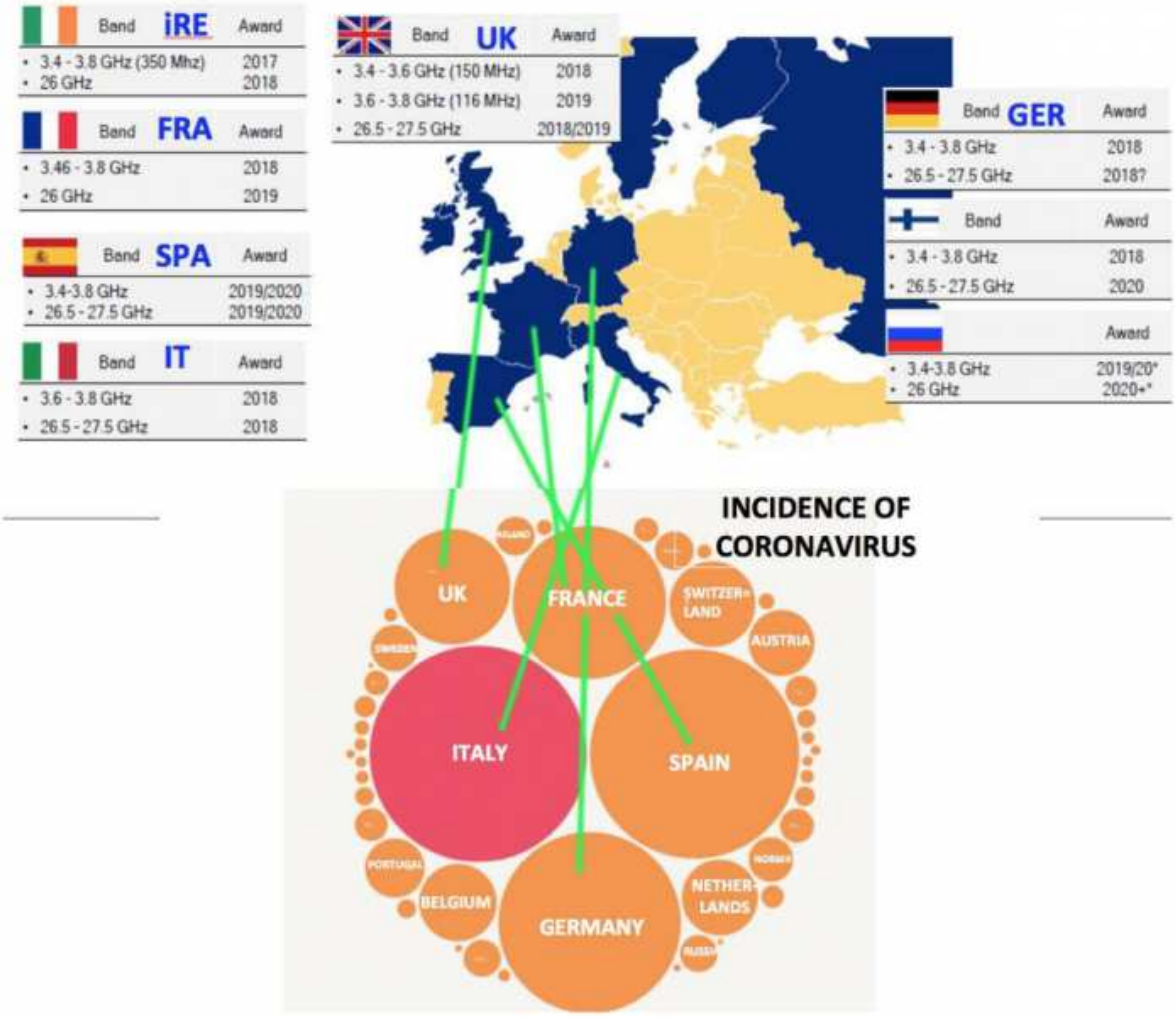
1. 1. **Chart of the 9 countries with the most infections worldwide.**
   2. **Chart and rates of infection of the 5 countries with the highest incidence in Europe.**
   3. **Chart and rates of infection of 4 nearby countries at the same latitude: Portugal, Spain, Italy, Greece.**
   4. **San Marino: comparison of rates of infection with Italy and Croatia.**
   5. **Italy: Incidence chart and 5G network.**
   6. **Spain: 5G coverage chart and rates of infection.**
   7. **Barcelona: Charts with 5G coverage and rates of infection.**
   8. **Madrid: 5G coverage charts and rates of infection.**
   9. **New York: coronavirus incidence chart and 5G network.**
   10. **“Border effect” between Mexico and the USA.**
   11. **Canada, USA and Mexico: chart of 5G networks and rates of infection.**
   12. **Africa: 5G network chart.**
   13. **Persian Gulf: 5G network and US military bases.**

14. **Chart and rates of infection of China and neighbouring countries.**

1. CHART OF THE 9 COUNTRIES WITH THE MOST INFECTIONS WORLDWIDE



2. CHART AND RATES OF INFECTION OF THE 5 COUNTRIES WITH THE HIGHEST INCIDENCE IN EUROPE



3. CHART AND RATES OF INFECTION OF 4 NEARBY COUNTRIES AT THE SAME LATITUDE: PORTUGAL, SPAIN, ITALY, GREECE

Comparison of no. of infections per 1000 inhabitants in 4 countries near the same latitude and using 5G networks

	1.02	2.79	2.08	0.15
5G NETWORK:	NO	YES	YES	NO

The average for Spain and Italy is 2.4.
The average for Portugal and Greece is 1.09.
Conclusion: the two countries with 5G have 220% more infections.
Note: data for 4 April 2020

4. SAN MARINO: COMPARISON OF RATES OF INFECTION WITH ITALY AND CROATIA

No. of cases per 1000 inhabitants (Daily data *El Pais* 13.4.20)

ITALY	SAN MARINO	CROATIA
2.59	10.56	0.39

Result: San Marino - the first European state with 5G technology - is the state with the highest no. of cases per 1000 inhabitants. 4.07 times more than Italy and 27 times more than Croatia, which does not have 5G.

San Marino set to become the first 5G country

engineeringpro

by Richard Morten | 19/07/2017 | F Like | Follow

Following the signing of a Memorandum of Understanding (MoU) with Telecom Italia, San Marino is set to become the first country to go fully 5G.

Telecom Italia intend to use San Marino as a testing ground for the next generation of wireless tech.

"Why San Marino? Because the self-contained nature of the state, and its relatively few restrictions on the use of radio frequency makes it the ideal place to test the latest development in telecoms connectivity.

"Telecom Italia intends to double the number of its mobile sites within the country and will additionally install a network of small cells in downtown San Marino." https://www.fircroft.com/blogs/s an-marino-set-to-become-the-first-5g-country-72001910124

Most infected Coronavirus countries: San Marino, Italy, Norway, S.Korea, Switzerland, Iran

Juergen T Steinmetz March 15, 2020 04:34

"Considering very small countries included the worst outbreak in the world is currently recorded in San Marino with 101 cases in a country of 33,400."
https://www.eturbonews.com/567130/most-infected-coronavirus-countries-san-marino-italy-norway-s-korea-switzerland-iran/

The top 5 Coronavirus countries no longer include China. Currently, Coronavirus is terrorizing 152 countries and territories around the world. Most media reports the worst outbreaks by the number, which is not really giving the public a clear picture.

100 sick in a country like China is different from 100 sick in a country like San Marino.
Considering very small countries included the worst outbreak in the world is currently recorded in San Marino with 101 cases in a country of 33,400. It means calculating by population it would calculate to 2994 cases in a million.

If not considering countries with less than a million people, the worst outbreak currently is in Italy with 349.9 cases per million, followed by Norway with 204.6 cases per million.

"Considering very small countries included the worst outbreak in the world is currently recorded in San Marino with 101 cases in a country of 33,400."

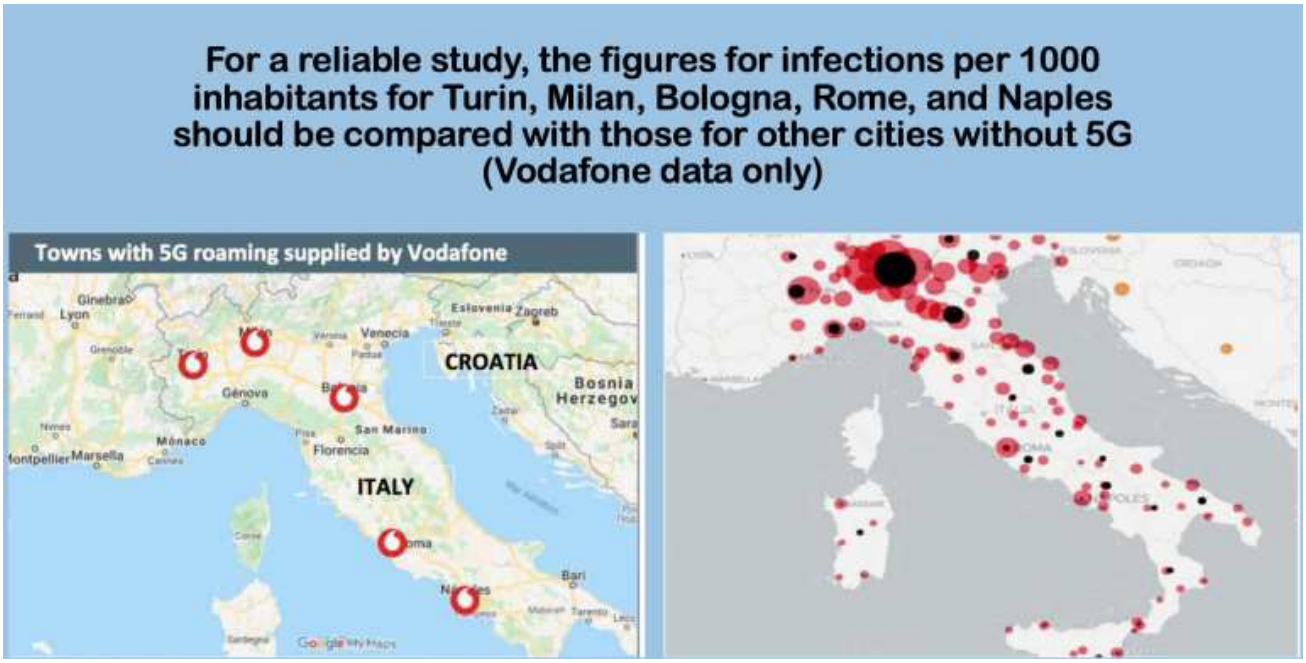
5. ITALY: INCIDENCE CHART AND 5G NETWORK

For a reliable study, the figures for infections per 1000 inhabitants for Turin, Milan, Bologna, Rome, and Naples should be compared with those for other cities without 5G (Vodafone data only)



6. SPAIN: 5G COVERAGE CHART AND RATES OF INFECTION

Data for cities with 5G should be related to the number of infections in those cities. Since data by city are not available, the comparison has been made with data for autonomous regions. This causes the data of the capitals to be diluted with those of their region.

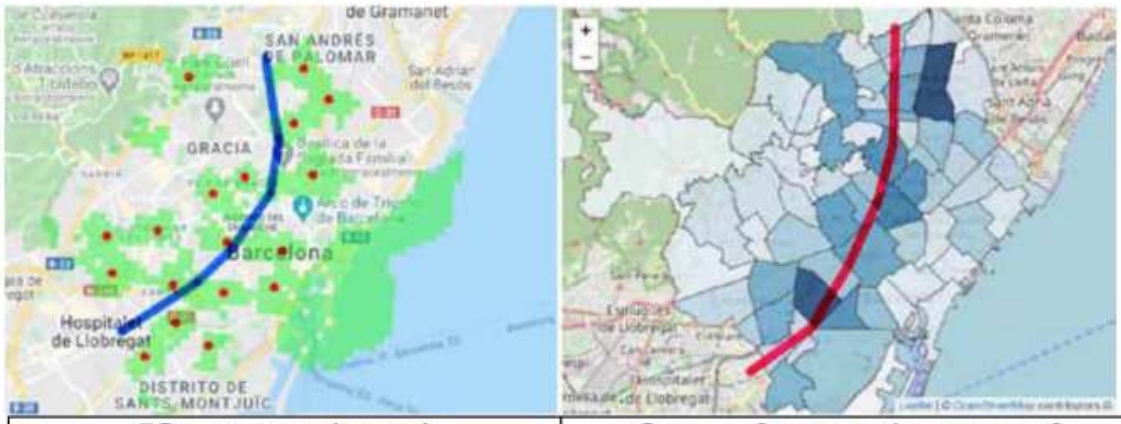
This is why the comparison in autonomous regions with one or two provinces is more significant: Extremadura, Murcia, Madrid, Navarra, Rioja, Balearic Islands, Asturias or the Canary Islands. Also in Euskadi since the three capital cities have 5G.

TOWNS WITH 5G **CORONAVIRUS INFECTIONS (for autonomous region)**

Infections per 1000 inhabitants Spain: 2.4
Madrid: 5.4 Catalonia 3.2 Navarra 4.5 Logroño: 6.62 Aragon: 2.3 Euskadi: 3.7
Extremadura: 1.7 Balearic Islands: 1.02 Murcia: 0.8 Ceuta: 0.8 Canaries: 0.7

7. BARCELONA: CHARTS WITH 5G COVERAGE AND RATES OF INFECTION

Correlation of no. of infections per 1000 inhabitants with 5G



5G coverage (green) (red dots refs. for curve tracing)	Cases of coronavirus - no. of infections per 1000 inhabitants

(Data 10 April 2020)

Sectoral maps – cases per 100,000 inhabitants

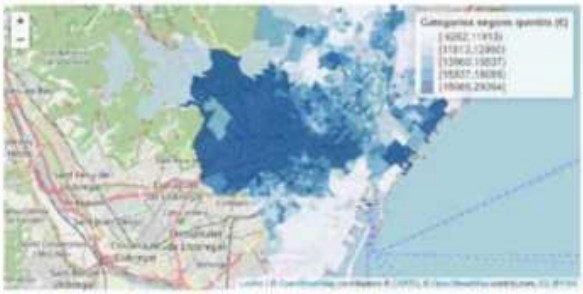
A

Cumulative incidence of COVID-19 x 100,000 habitants

B

Distribution of income

Level of average income (per capita) for 2018 by section of Barcelona



C

C

Distribution of deprivation

Distribution of socio-economic deprivation for 2011 by section of Barcelona

D

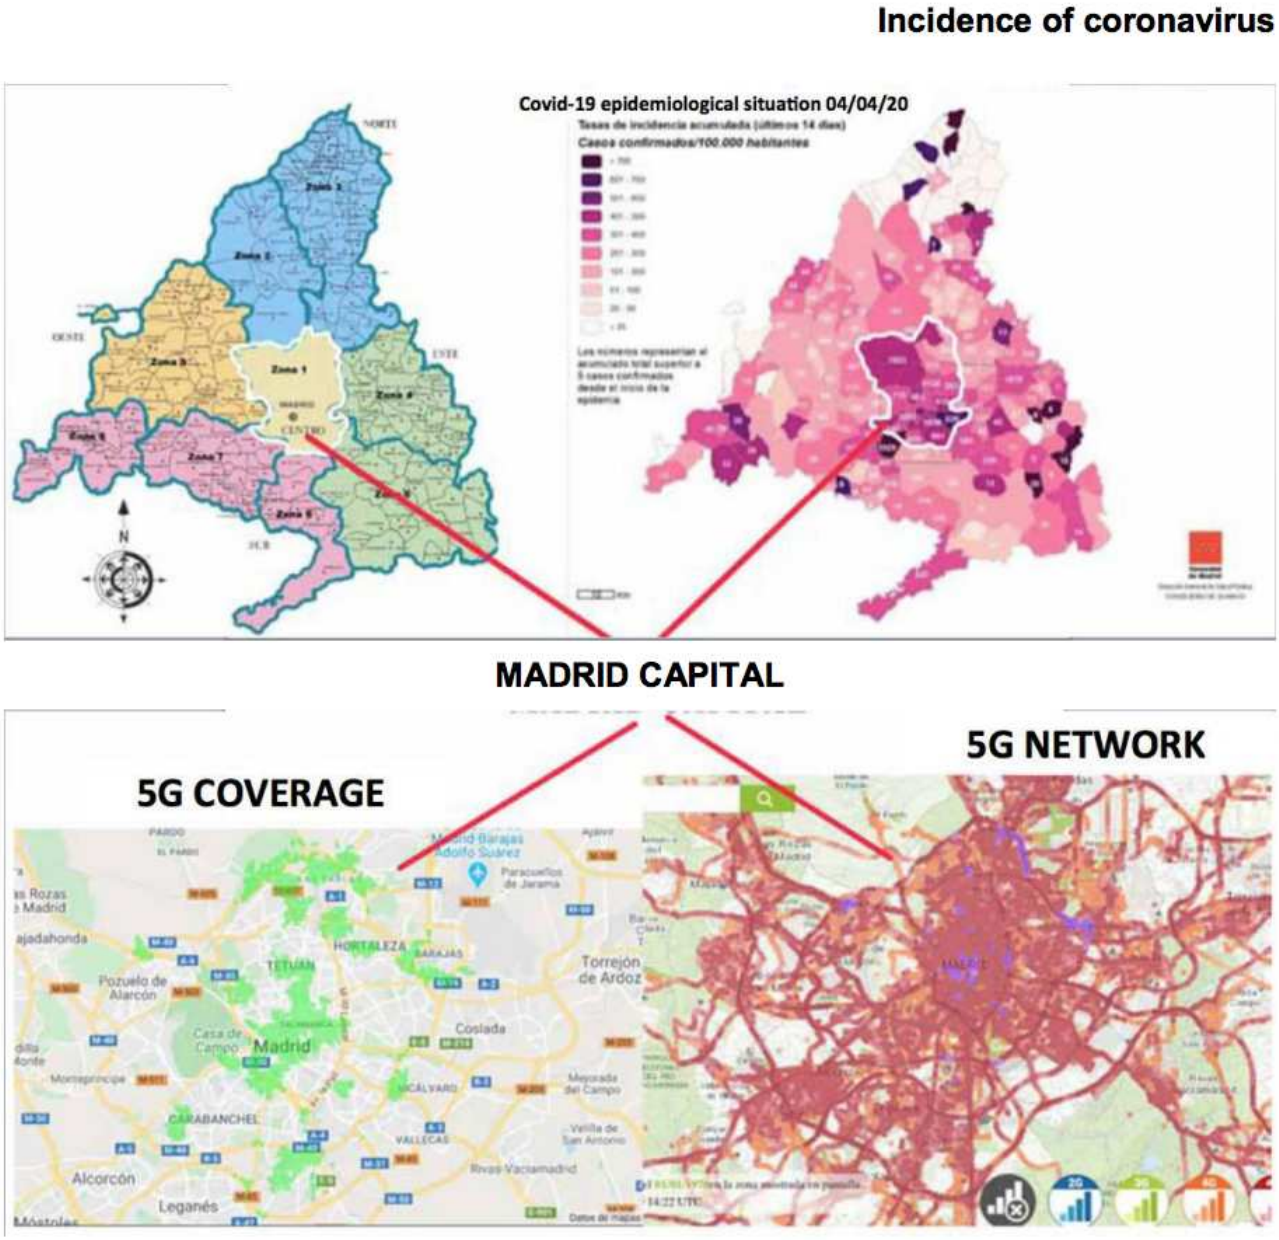
Distribution of incidence by socio-economic level

Coverage maps

Note: the 4G coverage is general and therefore does not serve in this case to compare areas of incidence of coronavirus. However, the map of 5G is the one that best matches map A. This demonstrates that the 5G factor is decisive.

Data for 21 April 2020.
Conselleria Salut. Generalitat Cat.

8. MADRID: 5G COVERAGE CHARTS AND RATES OF INFECTION



9. NEW YORK: CORONAVIRUS INCIDENCE CHART AND 5G NETWORK

COVID 19 – 5G correlation
No. of cases per 1000 inhabitants

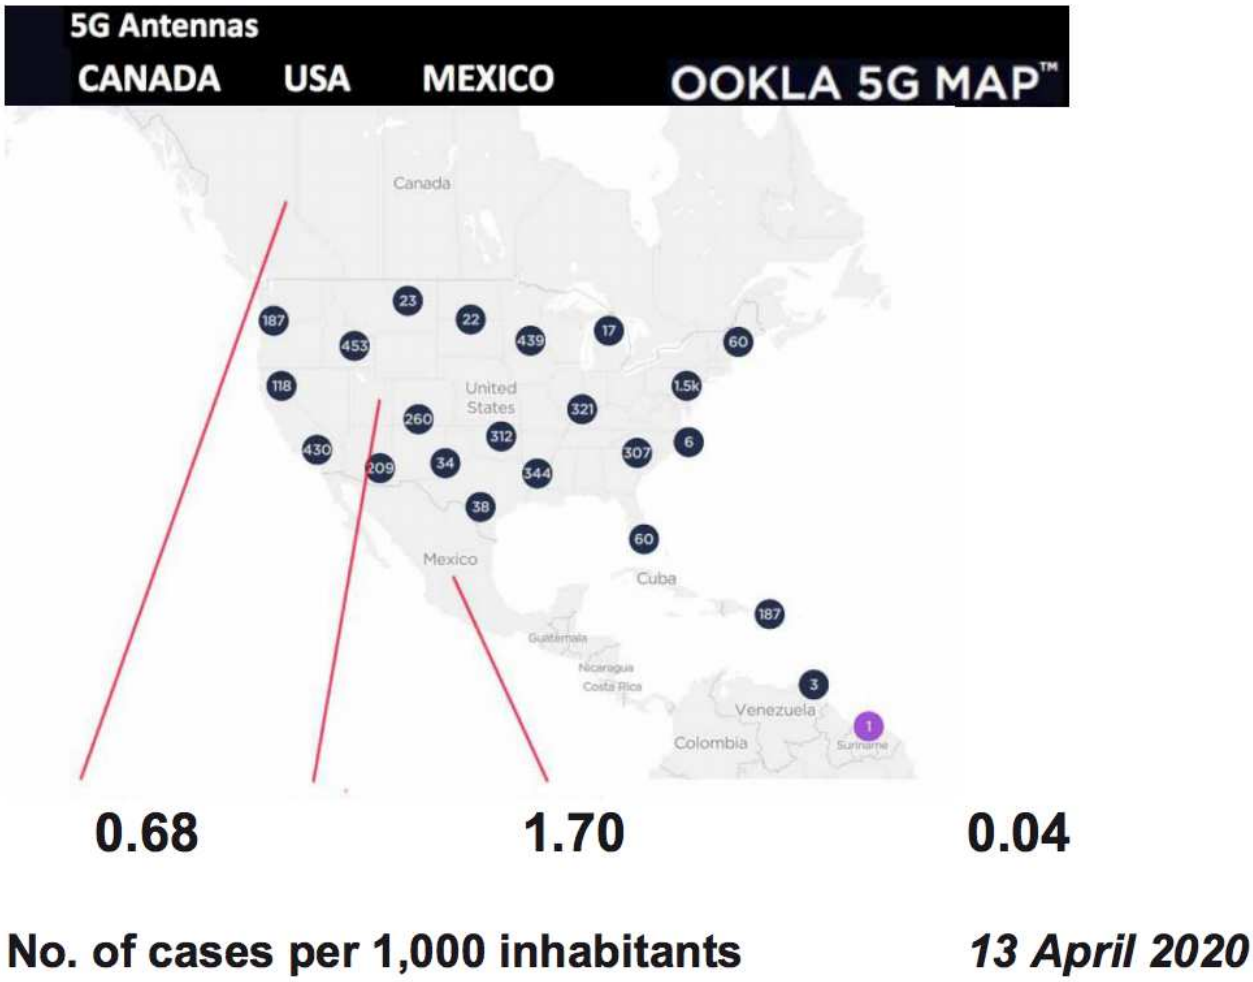
10. "BORDER EFFECT" BETWEEN MEXICO AND THE USA

Data for 3 April 2020 **– infections per 1000 inhabitants**

California	Arizona	New Mexico	Texas	Mexico	USA
0.28	0.31	0.20	0.18	0,012	0.814

The average for the 4 US states is 0.242, which is over 2,000% more than Mexico.
The average for the US is 0.814 or 7.000% more than Mexico.

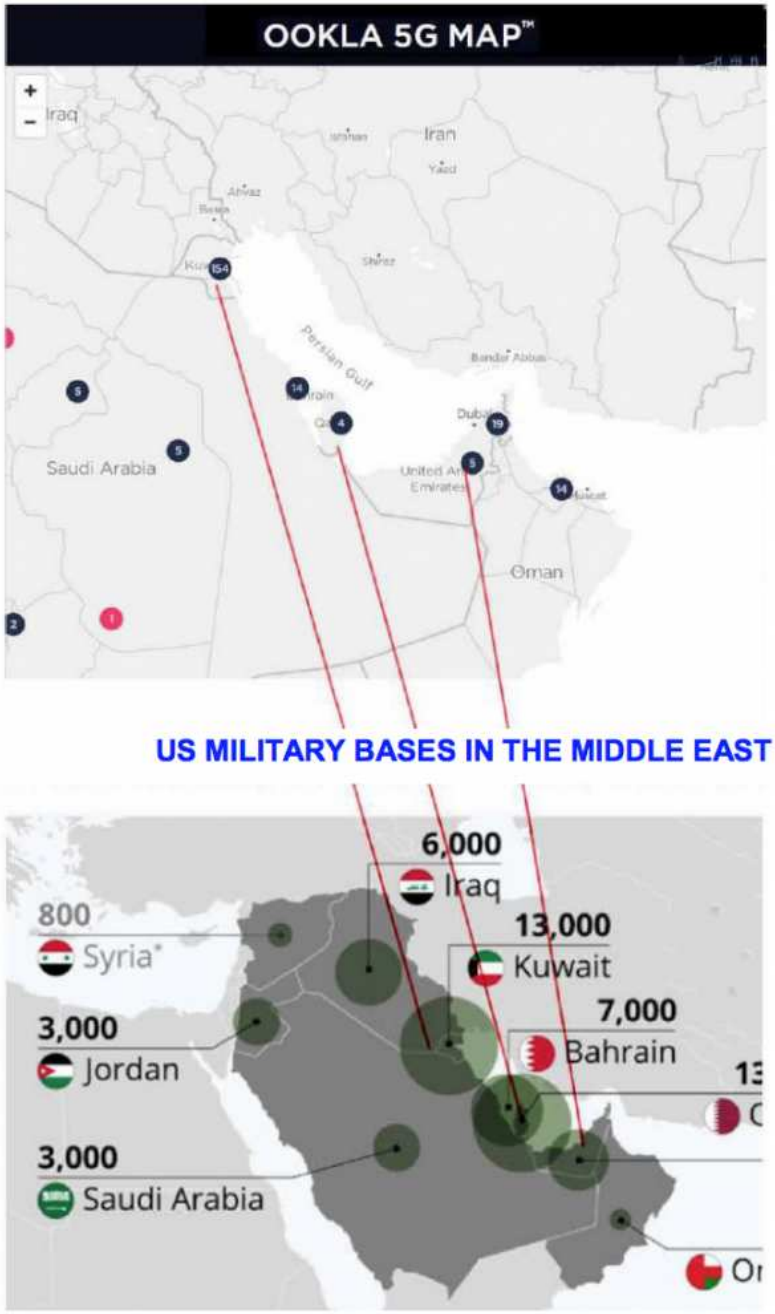
11. CANADA, USA AND MEXICO: CHART OF 5G NETWORKS AND RATES OF INFECTION



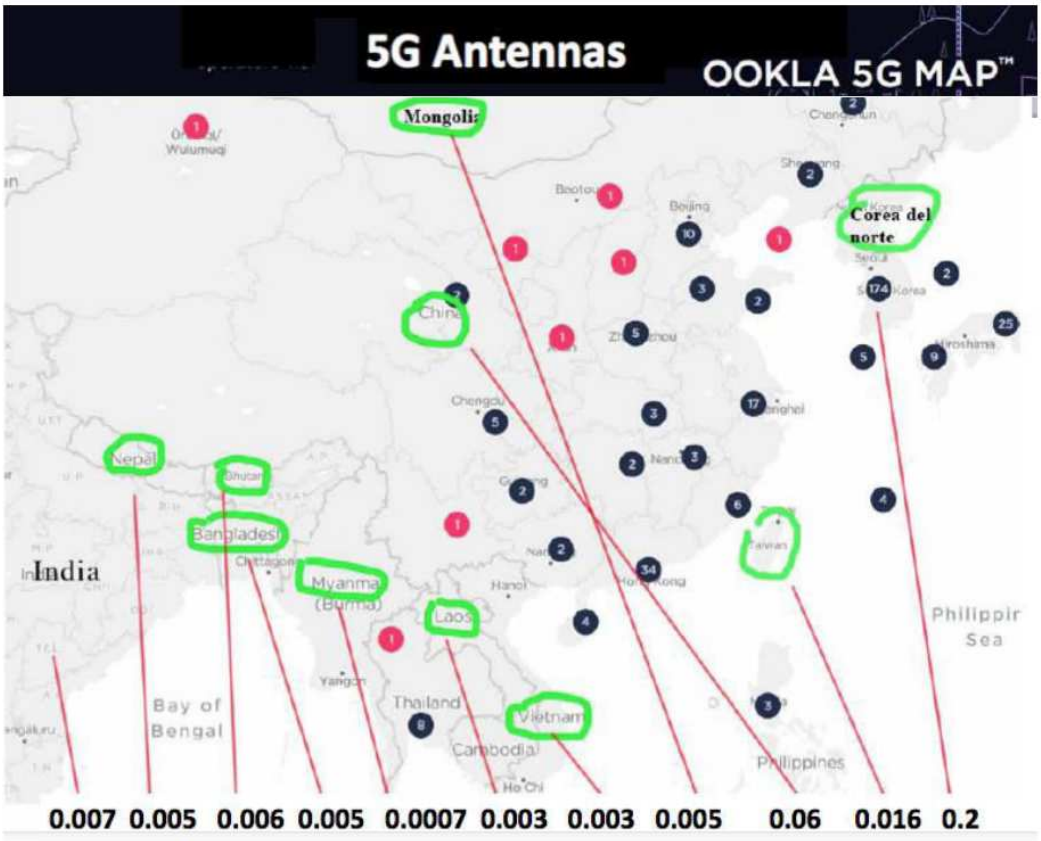
12. AFRICA: 5G NETWORK CHART

The African country with the most cases of coronavirus is South Africa, the only African country that has 5G.

13. PERSIAN GULF: 5G NETWORK AND US MILITARY BASES



14. CHINA AND NEIGHBOURING COUNTRIES: CHART AND RATES OF INFECTION



No. of cases per 1000 inhabitants, 13 April 2020.
The countries neighbouring China have approximately 10 times fewer cases per 1000 inhabitants.

Results and discussion

To know whether or not the result obtained is that of a random phenomenon, a statistical analysis of the results of an experiment must be carried to calculate the probability of the event occurring. The probability calculation is obtained by dividing the number of favourable cases by the number of possible cases. If the result shows that it is not a random phenomenon, it shows sufficient causal reason to analyse the causes.

To eliminate any upward errors we will always opt for the most conservative numerical option.

Let us therefore calculate the probability of three of the examples analysed above.

(a) Probability that the 9 most contagious countries on the planet are countries with 5G networks.

There are 194 countries on the planet. As of 6 March 2020, according to GSMA, there are 24 countries with 5G technology.
Pr = 24/194 x 23/193 x 22/192 (nine times in total) = 0.1237 x 0.1191 x 0.1145 x 0.1099 x 0.1052 x 0.1005 x 0.0957 x 0.0909 x 0.0860 = = 1.47 x 10 (high -9).

The probability is 1 in 680,000,000.

If we include Japan, which also has 5G and rates of infection similar to those of South Korea …the probability is 1 in 8,500,000,000.

(b) ***Probability that the 5 most contagious countries in Europe have 5G networks.***
There are 49 countries in Europe, among which it is currently difficult to know if they currently deploy 5G, as there are 5 that have declared a moratorium, and many others do not have operational networks although companies publish as if they were already operational when they have signed agreements. We will calculate it downwards, as a conservative option, we will assume that about 15 countries have operational 5G systems.
Pr = 15/49 x 14/48 x 13/47 x 12/46 x 11/45 = 0.00157.

The probability is 1 in 637.

(c) The case of San Marino is highly significant. It is located within the Italian territory, with a similar culture, economy, and social level, but presents much higher rates of infection. The only difference is the time of exposure of its citizens to 5G radiation, because it was the first state in the world to implement such technology on 4 September 2018, while in Italy it was 5 June 2019. This opens the door to debate about the likely influence of 5G on the increase in the rates of infection.
Pr = 1/194 x 1/194.

The probability is 1 in 37,636.

These figures are eloquent enough to make calculating the other cases unnecessary.

The results for the city of Barcelona (pp. 7-8) indicate that sociological factors do not have a significant influence on the rates of infection, but if we see a clear relationship with the 5G coverage map, which added to the 4G coverage, gives us a correlation between mobile coverage and the proportion of cases of coronavirus. If more data were available, this study should be extended to other cities.

Findings

1. The results obtained demonstrate a clear and close relationship between the rate of coronavirus infections and 5G antenna location.

2. This study does not analyse the beneficial or harmful effects on humans of 5G electromagnetic radiation. However, it does indicate a possible cause-effect in the current pandemic.

3. A "border effect" is significant, original and unique to this pandemic: it presents marked differences between contiguous states with and without 5G installation. it is particularly significant that the countries bordering China have very low rates of infection. One may also compare between Mexico and the USA or between Portugal and Spain, etc.

4. The case of San Marino is particularly significant. It was the first state in the world to install 5G and therefore, the state whose citizens have been exposed to 5G radiation the longest, and

suspiciously, the first state in the world with infections. The probability of this happening is 1 in 37,636.

5. In the cities studied, Madrid, Barcelona and New York, this correlation is also observed. In the study of the city of Barcelona (pp. 7-8), it can be seen that the socio- economic factor plays a significant role.2

6. It is very significant that on the African continent, with scarce health resources but without 5G, the rate of infection is very low, except for some antennas in South Africa, which also presents the highest rates of infection in Africa.

7. The rates of infection are diluted. The rates of some regions are influenced by cities with 5G, but the rates of infection of these cities are diluted in those of the region to which they belong. So it is more significant, as is the case of Spain, to compare uniprovincial autonomous regions, than among those that are formed by 3 or more of the old provinces. Thus we see that some regions with 5G such as Rioja, Madrid and Navarra, have rates between 4 and 8 times higher than others without 5G. The same is true in other cities around the world where the 5G network does not cover the entire territory of the state or region.

8. These data and results have the value of being taken "in vivo", not based on prospective or laboratory studies. Never before have we had so much epidemiological information about a disease in humans to be able to produce scientific studies. A means of answering the question of cause and effect would be to disconnect the 5G networks, at least as a preventive measure, and see the results of the evolution of cases of coronavirus. So would studying the rate of infection in a state that declared a 5G moratorium after the pandemic started and studying if the statistics change. Given the evidence presented here, the data and conclusions of this study urgently need to be given due consideration. Given the current gravity of the pandemic, the media and political and health authorities have a responsibility to take urgent action. A failure to act in the face of the findings of this study could be considered negligent at the very least and very possibly criminal.

Bartomeu Payeras i Cifre, 14 April 2020

2 Translator's note: there is a contradiction between the last paragraph of the section entitled "Results and discussion" and paragraph 5 of the section entitled "Findings". In one it is stated that "sociological factors do not have a significant influence on rates of infection", and in the other it is stated that they do.

I am completely shocked by the effects of 5G can have on the human body unborn children I can understand now why the Government allowed 5G to roll out when our country was completely in locked down many of us have signed a petition to stop 5G until it's been tested of the harmful effect on humans. I would be very grateful a letter be addressed of these dangers the harmful effects to children and adults and unborn children.

Kind Regards.
Grace Hall.

Was the output intensity of the 5G taken into consideration in this study?
Has it gone up to 300ghtz anywhere yet?

Reply

admin says:
June 3, 2020 at 5:31 pm

I don't know and I don't think the have used the 300 GHz frequency yet.

Beverly – you will have to ask the author of the paper if it has been published anywhere else. I honestly don't know. To my knowledge, so far, all three papers that have been published on this topic (see here, here, and here) are not being accepted for publication in journals. That's because the journals are likely controlled by the same monied interests that run the wireless industry.

I have been looking for a study like this for ages and found you on an African publication. thegrapevine.co.ug No they would not want to publish these papers. They certainly do not want this out there. On social media platforms anything that says Covid and 5G together is being censored big time. Then again a lot of other things are being censored as well. I have some friends that will pass it on for sure. Great work. Here are some links you might want to look into. Seem no one can find the anywhere that Virus is real. There is no Gold standard for it. It has not been isolated. PCR is not meant to identify a virus to start with. Make sure you keep a copy of everything you have in a file somewhere. Some thing can vanish and some get changed. So screen shots are always a good idea as well. There is a post there about the World bank. They were importing and exporting test kits for Covid 19 in 2017 and 2018. As soon as people went looking for it the World Bank changed it. That was just about a week or so ago. Some have screen shots and one person found an archived spot with it in there. Bless their dear hearts. This is an awesome find. Thank You. Big Hugs for you. https://shadowsbearsoutlook.blogspot.com/2020/09/pcr-covic-19-tests-are-worthless.html

This is a more than edifying study, even impressive, mainly because it has the merit of corroborating the highlighted factor with other factors, the influence of which undoubtedly hardens it.
It also makes a well-grounded and valuable generalization: if, until now, the influence of radiation generated by various wireless devices on various organs of the human body, especially the brain, has been shown, now the study of their harmful influence is extensive and even in-depth, because it draws attention to some genetic aspects.
However, it seems that there are counterexamples or – most likely – those states that seem to contradict those highlighted in this research have not been the subject of study. Brazil, where there is now an explosion of Pandemic, can be such an example. The very fact that the epidemic broke out there later is an almost as strong counterexample, because the 5G effect would have been simultaneous.
It would probably be more correct and valid in the long run for the 5G influence to be integrated among all the other factors "guilty" of current developments, factors such as environmental damage and, implicitly, the resources that people use, both for industry and for consumption, but also some social and psychosocial factors, not to mention cultural ones.
The latter factors are also essential and deserve separate and detailed treatment, especially as they were the ones that determined the feature and size (finally, the efficiency) of the social measures to the pandemic.
A personal opinion: I believe that the pandemic and the human capacity to react to the pandemic have shown that small and medium-sized systems are more viable, and a mistake or a sum/suite of small mistakes, propagated on a global scale, can be equivalent to a catastrophe.
In general we should think and build on a human scale and only science should look for healthy variants of the future, looking even at cosmic spatial and temporal possibilities (from where these fateful radiations now return), because – it is clear – technology can achieve almost anything science discovers.

5g is first implemented where the density of population is high. COVID clusters are mostly located where the density of population is high. So there is no surprise of finding a strong correlation, because they share the same cause : high density of population

Hello,
I have a question about all this and if anyone has an opinion, I'd really like to hear it. Over the last year when my teen daughter burns thru all our shared data, AT&T throttles our internet speed down, to where sometimes I can't even do an internet search. So my question is, could it be possible that the cell phone providers can crank up the 5G waves and get people, or people who are electromagnetic sensitive sick and then turn the 5G back down. Like after the protesters not wearing masks and msm saying there going to be another outbreak..and sure enough we're seeing a total spike in Covid cases now.

Let me know if anyone has an input on this.

Thanks,
Steven

Steven, I personally think this is very possible and also that they can use the smart meters on people's homes to seriously harm and injure the people inside the houses. The smart meters can also be used to ignite houses. This is all weaponry and can they definitely target people with these devices.

As a layman I wonder if the 5G effects are supposed to be the 'covid effects', what about places without 5G? What produces those effects there?

Reply

admin says:
October 30, 2020 at 2:40 am

4G LTE — and actually all wireless technologies — can produce devastating health effects. What we are seeing is various symptoms of radiation sickness. Not all of it is being caused by 5G. Alot of is being caused by 3G and 4G frequencies and radiation.

Reply

Devadeva says:
October 30, 2020 at 12:47 pm

Then one must ask why the 'covid' outbreak happened as a wave only now when 3 and 4G are around for many years.

Reply

frank orr says:
January 16, 2021 at 10:41 pm

Because we are told that is whats happening NOW .
I never got around to checking out new illness,s in the past ,i just wait to be told.
